

■ LAPP MILLWRIGHT TO SHOWCASE DUST COLLECTION SOLUTIONS AT WPE LANCASTER

MANHEIM, Pa. Representatives of Lapp Millwright LLC will discuss dust collection systems tailored to specific wood product manufacturer's needs at Wood Pro Expo Lancaster, Oct. 12-13 at Spooky Nook sports.

The company offers dust collection of all sizes, as well as fume and smoke collection systems. Lapp Millwright offers maintenance and repair services, too. Service technicians and installers have been trained to meet NFPA standards.

Wood Pro Expo is a regional event for woodworking businesses that brings together suppliers and experts for a localized presentation of equipment and supply solutions.

WPE includes a strong educational program on best practices for shop production and business management. The expo features a wide variety of equipment and supplies mainly geared to small and medium-sized shops.

Wood Pro Expo Lancaster takes place Oct. 12-13, 2023 at Spooky Nook Sports/Warehouse at the Nook in Manheim (Lancaster County), Pa.

■ TAKT LAUNCHES REPAIRABLE, MONO-MATERIAL SOFA BY ANDERSSSEN & VOLL

Danish furniture company Takt has launched a sofa made with mono-materials and designed by Anderssen & Voll to be fully repairable.

The sofa is Takt's first and follows the principles of the company's new Perpetual Sustainable Design code, led by its belief that "furniture should be loved, cared for and handed down", which is why "all of its furniture is designed for repair", Espen Voll explains. The launch follows a recent announcement from the European Commission of a "right to repair" with the view of facilitating the development of a circular economy and saving consumers costs.

When Anderssen & Voll met with Takt in 2019, the Norwegian design duo say they were impressed with the design-led company's commitment to "sustainability and accountability". Voll says that "eco-design should not be seen as a separate discipline" and instead should be integrated into the work of all designers.

The sofa takes its name from the wooden spokes that form the backrest, following a technique that was used to create flat surfaces across English and Scandinavian utility chairs for centuries, the designers explain.
